### MaxFlo Variable Speed Pump

MaxFlo VS™ brings variable-speed technology to the popular MaxFlo pump family. A MaxFlo VS pump is an easy upgrade that includes 8 customizable speed and timer functions as well as a 24-hour programmable clock to monitor power consumption and maximize energy savings.

Advanced hydraulic design offers increased efficiency and incredibly quiet operation, especially at lower speeds. A permanent magnet totally-enclosed fan cooled motor means all MaxFlo VS pumps are designed with efficiency in mind. The control pad can be rotated in four directions on the pump or removed and wall mounted.

1 1/2" x 2" union connections allow for seamless installation in any application.

### SharkVac XL Robotic Cleaner

Simple, fast and tremendously effective, the Hayward® SharkVac XL™ covers the entire pool including the walls and water line. The three settings allow adjustment to all pool configurations.

Requires no hoses or hookups nor additional pumps and runs separately from the pool's filtration system reducing filter backwashing and water usage.

Maintenance is quite simple: easily replaced rollers and access to the filtration panels through the top.

Out-of-water sensor protects the motor by preventing cleaners from running out of the water. Beach-entry sensor reverses direction when pool cleaner starts climbing out of the water.

### SkimMaster® SP1070

The SP1070 automatic skimmer is part of the Hayward SkimMaster® series. It is a large capacity skimmer featuring a round, tamper proof access cover, self-adjusting 8" weir with a stainless steel spring, dual outlets and threaded internal connections to accommodate pressure testing.

The SP1070 includes a 3/4" knockout port that can be used as a pool water fill line port or to guard against a pool overflow situation.

The SP1070 is of a durable unibody construction and comes with either a round or square lid, and adjustable deck collar and large debris basket.

The legendary Hayward AstroLite™ can be found in swimming pools all over the world.

The AstroLite comes with a range of attractive face rims: from an injection molded, patterned design made of rugged, non-corrosive glass filled polypropylene to an attractive smooth, machine polished stainless steel frame that provides corrosion-free performance.

The AstroLite fixtures come standard in 12V and in 100W or 300W versions with varying cord lengths to satisfy any installation.

The lights are 100% tested for safety and quality assurance and are UL listed.

An E-Z lock clamp and reflector assembly allow for easy re-lamping. An excellent value when paired along with the Hayward Duraniche.

## The Importance of Pool Brushing

As simple as it may seem, brushing is a very important part of the pool maintenance process and proper brushing can go a long way in ensuring that the pool remains in a good condition for a long time.

Over time algae and dirt accumulate on the pool surfaces. In the case of plaster finishes the dirt accumulates in the tiny crevices and leads to algae growth. In tile pools this happens in the grout areas as well as on the tile surface where a biofilm begins to develop. Sanitizing the pool with chlorine kills the algae but doesn't necessarily remove it. The algae, dirt and biofilm must be physically removed by brushing so that they do not take hold.

It's always best to brush in an even motion, overlapping each stroke with the previous one to ensure full coverage.

Brush the dirt towards the drain as far as possible so that it will be sucked into the drain pipe and then be filtered out.

There are different types of brushes available for the pool and the type of brush to use usually depends on the surface finish.

It is a good idea to purchase a heavy-duty pool brush since it

will be used frequently. Cheaper brushes tend to break due to the frequent exposure to pool chemicals.

Plastic bristled brushes including nylon bristles are the best for daily use and for use on liner pools.

18" Basic Plastic bristled brush  
CWB001

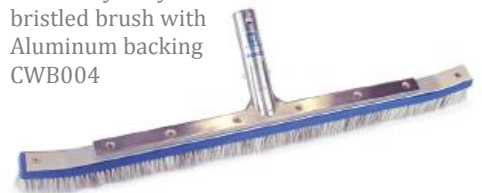

Stainless Steel bristle brushes are best used on plaster finishes and for removal of stubborn algae and dirt from grouts and other rough surfaces.

18" Plastic bristled brush with Aluminum backing  
CWB002

Mix bristle brushes are also useful and long lasting. Stainless Steel bristle brushes must never be used on liner pools.

24" Heavy Duty Plastic bristled brush with Aluminum backing  
CWB004
